### 8.2.1. Appropriate engineering controls

For conventional cosmetic products, the usual measures for handling of chemical products are sufficient. For flammable products (i.e. perfumery products with flammable solvents) ensure adequate ventilation of the storage and working area. Remind that proper technical measures for exposure controls should prevail on the adoption of personal protecting equipment.

For conventional cosmetic products (except: hair dyeing products, depilatories, depigmenting products etc.) the use of special personal protection tools (for skin, eyes, respiratory tract) is not necessary. If case of a prolonged contact with the product, the use of adequate gloves is however suggested.

Adopt all possible procedures to avoid contamination of the environment with the product.
